FEHR ADVICE

THE BEATRIX STRATEGY INTELLIGENCE SUITE

An evidence-based behavioral economics solution for the strategic development of UBS

FehrAdvice & Partners AG
28.01.2026

EXECUTIVE SUMMARY

UBS Switzerland is at a strategic turning point following the integration of Credit Suisse. The bank has a strong position in the Swiss market, a consolidated reputation and a high level of internal expertise in the field of sustainability. At the same time, expectations of impact, transparency and credibility are increasing.

Public and regulatory pressure to make measurable contributions to sustainability continues to grow. Today, customers, politicians and society expect **demonstrable impact instead of declarations of intent**. The results show that the existing initiatives are substantial, but their impact on perception and behaviour is not yet fully visible or controllable.

Group Sustainability & Impact has numerous programs, data and analyses at its disposal – but the challenge lies less in the quantity than in linking **this information to a controllable system**: How can you identify which topics strengthen trust, which create friction losses, and where the greatest opportunities for positioning lie?

This is exactly where the BEATRIX Intelligence Suite comes in: It makes behavior, perception and impact systematically analyzable – and thus creates an evidence-based basis for strategic decisions in the context of sustainability.

PROJECT OBJECTIVE AND APPROACH

The aim of the project is to **establish sustainability as a strategic and measurable resource** for UBS Switzerland – by combining behavioural economic analysis and digital decision support. To this end, specific issues from the day-to-day life of Group Sustainability & Impact are regularly analysed – for example on communication, reputation, product development or stakeholder impact. Each analysis provides:

- **Fast, precise assessments** of current decision-making issues,
- **Clear recommendations for action** based on the Behavioral Change Model (BCM 2.0),
- and direct **integration with the BEATRIX Intelligence Suite** (Module L) so that analyses can be carried out independently and insights are permanently anchored.

The procedure follows a structured four-phase process:

1. **Definition of the issues** together with UBS (monthly)
2. **Behavioral economic analysis** along clear model logic
3. **Documentation of the results** as a brief analysis or comprehensive report
4. **Integration into BEATRIX (Module L)** and introduction of the UBS teams to its use

This turns selective analysis into a continuous, controllable learning and decision-making tool.

EXPECT RESULTS AND VALUE

The project creates both **short-term benefits in UBS Switzerland's day-to-day business** and **long-term strategic impact**.

In the short term:

- Clear, fact-based decision-making bases for current issues
- Reduction of uncertainties in communication, positioning and project prioritization
- Time savings through structured, comprehensible analyses

In the medium term:

- Uniform decision-making logic across all sustainability topics
- Early detection of reputational and acceptance risks in the Swiss context
- Establishment of a systematic learning process within the team

Long-term:

- Strengthening UBS's strategic positioning as a credible, responsible institution
- Sustainability is established as a **manageable and communicable resource**
- The BEATRIX Intelligence Suite will become an integral part of Group Sustainability & Impact's decision architecture

FehrAdvice & Partners supports UBS as a **strategic sparring partner** – scientifically sound, pragmatic in its implementation and consistently focused on impact. The result: **more clarity, greater impact and measurably more trust – both internally and externally.**

WHAT IS THE BEHAVIORAL CHANGE MODEL? 17

DIGITAL EXPANSION 18

1 STARTING POINT AND CHALLENGE

UBS Switzerland is in a strategically and organisationally special phase. The successful integration of Credit Suisse has opened a new chapter in the company's development – one that brings with it both great opportunities and increased complexity.

In the area of sustainability, the Bank is faced with the task of bringing together an existing large number of initiatives, policies and reporting mechanisms into a coherent and effective overall strategy. Organizationally, sustainability is now anchored in several areas – from investment products to risk management and corporate responsibility. This decentralized structure has led to considerable progress, for example in the implementation of ESG criteria in investment processes and in strengthening regulatory compliance. At the same time, this results in recurring friction losses in coordination when topics touch on different strategic objectives or decision-making processes are not clearly prioritized.

Strategically, UBS Switzerland has an exceptionally good starting position: it has a strong brand, a high level of credibility in the Swiss market and a growing reputation as a reliable, responsible institution. This puts UBS Switzerland on a **solid footing** today, but it has not yet been fully transformed into an integrated sustainability architecture. This phase of consolidation offers the ideal opportunity to transfer existing strengths into a clear strategic line – and to position sustainability as a **visible, measurable and confidence-building resource** in the Swiss market.

WHY A NEW APPROACH IS NEEDED

In practice, recurring frictions between aspiration and perception in sustainability management can be seen:

- Strategic messages reach target groups to varying degrees – regulatory issues are highly present internally, but often abstract for customers.
- Operational responsibilities are distributed, which means that decision-making processes temporarily lose clarity and speed.
- In the public perception, UBS continues to be caught between systemic relevance and social responsibility – an environment that requires targeted trust work.

Business-as-usual is no longer enough in this environment, because **sustainability has evolved from a topic to an expectation**. Society, regulators and customers increasingly expect **an evident effect** instead of a declarative attitude. A behavioural economics-based approach such as BEATRIX makes it possible to close precisely this gap in impact: it combines scientific evidence with management control and shows **how trust, behaviour and perception can be systematically built up and stabilised**.

IMPORTANCE OF THE PROJECT

With the establishment of a structured process for monthly behavioral economic analyses:

- ✓ central issues in sustainability management and communication are dealt with systematically and without delay, instead of only being assessed selectively and ad hoc.

- ✓ UBS Switzerland provides a robust basis for decision-making to prioritize campaigns, budgets and initiatives according to objective criteria.
- ✓ management gains clarity about opportunities, risks and areas of tension in a complex environment.
- ✓ and the organization strengthens its ability to consistently build and secure cultural resonance, reputation, and identity.

FehrAdvice & Partners acts as a sparring partner for the Chief Sustainability Officer of UBS – analytical, reflective, based on behavioural economics and tailored to the reality of UBS Switzerland. In this way, UBS is not only creating the basis for achieving a sustainable impact in sustainability management and communication, but also securing legitimacy, ability to act and credibility in a challenging market environment.

2 OBJECTIVE

The common goal of this project is to further develop **UBS Switzerland's sustainability strategy** in such a way that it becomes **strategically effective**, **commercially viable** and **behaviorally compatible** at the same time . The project sees itself as translation work: from strategic ambitions and regulatory requirements to **concrete, observable behavior** – among customers, employees, managers and stakeholders.

TARGET PERSPECTIVE

1. STRATEGIC OBJECTIVES

- ✓ **Providing orientation in a complex environment:** Sustainability management is given a tool to develop clear messages that are consistent both internally and externally.
- ✓ **Securing trust and legitimacy:** Campaigns and measures are checked in such a way that they have a cultural resonance and at the same time remain reputationally secure.
- ✓ **Setting priorities despite contradictory expectations:** The analyses help to direct resources specifically to those initiatives that have an impact and minimize risks.

2. BEHAVIORAL GOALS

- ✓ **Providing a scientifically sound basis for decision-making:** Questions are no longer answered intuitively or retrospectively, but on the basis of clear models and comprehensible analyses.
- ✓ **Making areas of tension visible:** Behavioral economic analyses show how different stakeholder groups (customers, employees, media, regulators) affect messages – and where conflicts or opportunities lie.
- ✓ **Ensuring consistency through systematic methodology:** FehrAdvice & Partners' analyses are based on the Behavioral Change Model, which is based on objective criteria and thus strengthens transparency and credibility – both internally and externally.

3. OPERATIONAL OBJECTIVES

- ✓ **Pragmatic analyses for everyday life:** Every question is dealt with in such a way that it leads to concrete options for action – be it for campaigns, communication measures or digital projects.
- ✓ **Early warning system for risks:** Central questions are tested in scenarios in order to identify possible reputational or acceptance risks at an early stage.
- ✓ **Establish continuous learning:** The monthly rhythm creates a routine that feeds insights directly into practice and continuously improves decisions over time.

3 OUR PROPOSAL FOR ACTION

FehrAdvice & Partners' approach to processing and analysis follows a clearly structured process that ensures that every issue is dealt with by UBS Switzerland in a consistent, scientifically sound and practical manner.

Phase 1: Definition of the questions

- On a monthly basis, Christian Leitz and his team define the relevant substantive issues that arise in the day-to-day work of UBS Switzerland. These can relate to strategy, communication or other topics from his work-related issues.
- The questions are submitted to FehrAdvice, together with all necessary documents, documentation or background information required for a precise analysis.
- In addition, it is determined whether the work should be carried out as a **short analysis** (3–5 pages) or as a **comprehensive analysis** (8–10 pages).

Phase 2: Behavioural economic analysis

- On the basis of the submitted materials and information, a **systematic analysis** is carried out along the logic of behavioural economics. For example, the relevant contextual factors and utility functions of the actors are modelled, and behaviour-based segmentations are carried out.
- The analysis is **scientifically sound** and based on clearly documented axioms and models, so that it remains comprehensible and verifiable at all times.
- From the analyses, practical **options for action** are derived that support Christian Leitz and his team in decision-making and make risks and opportunities visible at an early stage.

Phase 3: Preparation of the results

The results are documented in the form of a clearly structured assessment:

- **Brief analysis (3–5 pages)** for clearly focused, smaller questions.
- **Comprehensive analysis (8–10 pages)** for more complex, strategically important issues.

The structure of the reports follows a uniform structure:

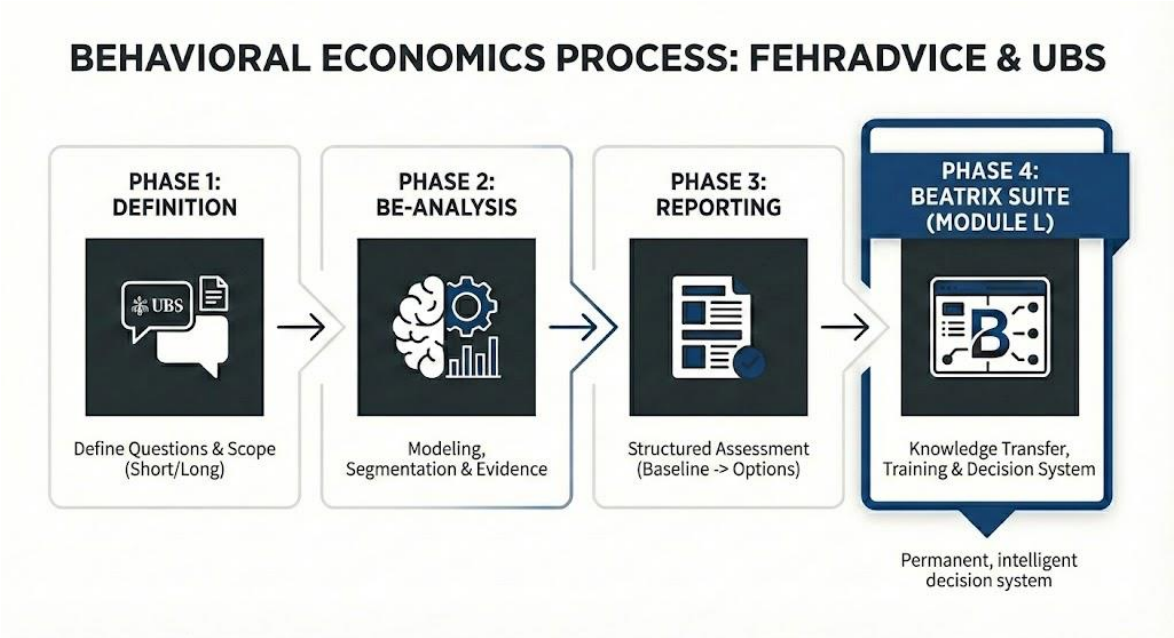
1. **Initial situation** – brief overview of the context.
2. **Challenge** – precise formulation of the question to be analyzed.
3. **Behavioral economic analysis** – Detailed explanation of the examination of the question and derivation of the recommendation proposals.
4. **Options for action** – concrete recommendations and options for further action.

Phase 4: Handover and introduction to the BEATRIX Intelligence Suite (module L only)

After completion of the analyses, the results are transferred to the **BEATRIX Intelligence Suite (Module L)** in a structured manner. This module serves as a central work and decision-making platform for the UBS Switzerland team. At the same time, a selected team will be introduced to the use of the BEATRIX Intelligence Suite and supported by FehrAdvice & Partners.

- **Data and knowledge transfer:** All analyses, models and recommendations for action developed are integrated into BEATRIX so that they remain permanently accessible, comparable and reusable.
- **Introduction and training:** Christian Leitz and his team receive a practice-oriented introduction to the use of the suite. The aim is to be able to use the functions independently – e.g. for retrieving analyses, comparing scenarios or deriving new questions.
- **Live demo and support:** In a joint appointment, concrete application examples are played through (e.g. a current communication or product question) in order to make the direct benefits for everyday work visible.
- **Ongoing support:** FehrAdvice ensures that new questions or adjustments can be added to the system on an ongoing basis. In this way, the suite remains up-to-date and continues to evolve together with the needs of the UBS team.

The introduction of **BEATRIX (Module L)** thus creates the transition from individual analyses to a **permanently available, intelligent decision-making system** – a tool that bundles knowledge, recognizes patterns and specifically supports decisions in the context of sustainability.



4 OUR RANGE OF SERVICES

For UBS, the current challenges result in three central strategic tasks that are directly the responsibility of the Chief Sustainability Officer.

Challenge	Module	Objective
Answer individual questions precisely and model-based.	**S**	Provides fast, precise and scientifically sound answers in the form of short or detailed analyses.
In-depth analysis of several issues.	**M**	Detailed analysis and comparison of causal relationships as well as derivation of strategic options for action.
Introduction of the BEATRIX Suite for in-depth analysis of complex topics and tailor-made strategy development.	**L**	Focused introduction of the BEATRIX Intelligence Suite including simulations and 1-to-1 support by FehrAdvice & Partners – immediately usable for priority decisions

These three modules differ primarily in **the scope and frequency of behavioral economic analyses**.

MODULE S – ANSWERING INDIVIDUAL QUESTIONS PRECISELY

Objectives:

- ✓ **Create clarity**: Provide answers to precise questions from everyday work at UBS - quickly, comprehensibly and usably.
- ✓ **Secure decision**: Show options so that decisions in marketing and projects are not based on intuition alone.
- ✓ **Identify risks**: Early indications of potential stumbling blocks (e.g. reputational risks, internal acceptance barriers).

Services:

- **One systematic, comprehensive analysis** (40-50 pages) or **2 short analyses** (5-7 pages each) **per month**
- 2-3 weeks per analysis, depending on scope and material situation
- Evaluation of the documents and materials provided by UBS
- **Scientifically sound processing** of the questions with derivation of practical options for action.

Out of scope:

- × Empirical primary survey (quantitative, qualitative, experimental)
- × Operational implementation or campaign management
- × Development or implementation of communication measures

Deliverables:

→ Report in the form of 2 brief analyses (5-7 pages) or a comprehensive analysis (40-50 pages) per month:
- Uniform structure: Initial situation – Research question – Behavioural economic analysis – Options for action

Duration: 3 months (i.e. three monthly cycles of analyses)

Price: CHF 12,000 (excl. VAT)

MODULE M – IN-DEPTH ANALYSES OF SEVERAL QUESTIONS

Objectives:

✓ **Connecting topics**: Preparing analyses of several questions in such a way that connections and areas of tension become visible.

✓ **Setting priorities**: The UBS team is given a sound basis for managing resources and attention in a targeted manner.

✓ **Compare options for action**: Compare alternatives in a comprehensible way to enable better decisions.

Services:

- **Two systematic, comprehensive analysis** (40-50 pages) or **3 short analyses** (5-7 pages each) **per month**
- 2-3 weeks per analysis, depending on scope and material situation
- Evaluation of the documents and materials provided by UBS
- **Scientifically sound processing** of the questions with derivation of practical options for action.

Out of scope:

× Empirical primary survey (quantitative, qualitative, experimental)

× Operational implementation or campaign management

× Development or implementation of communication measures

Deliverables:

→ Report in the form of 2 short analyses (5-7 pages) or two comprehensive analyses (40-50 pages) per month:
- Uniform structure: Initial situation – Research question – Behavioural economic analysis – Options for action

Duration: 3 months (i.e. three monthly cycles of analyses)

Price: CHF 18,000 (excl. VAT)

MODULE L – INTRODUCTION TO THE BEATRIX SUITE

Objectives:

- ✓ **Predict impact**: Immediate availability of strategically relevant scenarios and impact forecasts
- ✓ **Ensure flexibility**: Clear decision-making bases for the team's current priorities
- ✓ **Anchoring analytics**: Permanent use of the BEATRIX Intelligence Suite to answer strategic questions

Services:

- Service components from module M
- **Onboarding to the BEATRIX Intelligence Suite** (Chief Sustainability Officer + defined key people)
- Modelling of priority decision-making topics (e.g. sustainability strategy, economic development, communication on political projects)
- Preparation of impact and scenario analyses with clear recommendations for action
- **Sparring to use the Intelligence Suite** to answer further questions

Out of scope:

- × Long-term support or monitoring
- × Detailed implementation preparation in the specialist departments
- × Operational project management
- × Stakeholder participation processes

Deliverables:

- → Deliverables from Module M
- → Direct access to the BEATRIX suite for the defined duration
- → Decision dossier with scenarios and impact forecasts
- → Recommendations for action for the priority questions

Duration: 3 months (i.e. three monthly cycles of analyses)

Price: CHF 35,000 (excl. VAT)

The benefits for UBS Switzerland, Group Sustainability & Impact

The project will provide immediate and long-term added value for UBS Switzerland. The use of the **BEATRIX Intelligence Suite** creates an instrument that can be used directly in UBS's everyday life – and at the same time has a strategic, cultural and reputational effect.

1. Concrete support in everyday work

- ✓ **Quick orientation:** The team receives clear, data-based analyses on issues that arise in day-to-day business – from regulatory requirements to stakeholder communication to proof points in the Swiss market.
- ✓ **Secure decision-making bases:** Sustainability decisions no longer have to be based on assumptions or individual opinions – BEATRIX provides comprehensible assessments that make risks and opportunities visible.
- ✓ **Saving time and resources:** Instead of having long consultations, precise decision-making options and recommendations for action are available that can be used immediately.

2. Strategic added value for UBS Switzerland

- ✓ **Strengthening positioning:** Sustainability is being used even more specifically as a strategic value driver – measurable and compatible with UBS's overall strategy.
- ✓ **Reducing reputational risks:** The model-based early identification of areas of tension in the Swiss context further strengthens UBS's credibility and acceptance as a responsible bank.
- ✓ **Making impact transparent:** UBS's contribution to Swiss society – economically, socially, ecologically – is recorded in a structured manner and communicated visibly.
- ✓ **Designing proof points:** Central sustainability initiatives are developed as concrete evidence of trust and tested for their resonance with customers, employees, politicians and the public.

3. Organizational benefit for the team

- ✓ **Uniform decision-making logic:** All areas involved fall back on the same behavioral economic analysis and evaluation framework – this reduces friction losses and increases coherence in decisions.
- ✓ **Learning and development process:** The regular use of BEATRIX creates structured organizational learning – findings can be used cumulatively across periods of time and topics.
- ✓ **Strengthening the team identity:** Working with BEATRIX makes progress, connections and successes visible. This promotes transparency, motivation and common orientation.

With this project, UBS Switzerland gains a tool that facilitates the day-to-day work of Group Sustainability & Impact, strengthens the strategic management of sustainability and visibly consolidates the bank's cultural legitimacy in the Swiss market. Sustainability thus becomes – in the best sense of the word – **manageable, communicable and trust-building.**

APPENDIX

WHO WE ARE

FehrAdvice & Partners AG is the leading **strategy and management consultancy for behavioral economics** in the German-speaking world. Since its founding by Prof. Ernst Fehr (University of Zurich) and Gerhard Fehr in 2010, we have been supporting companies, authorities and organizations in the design of effective, strategy-based management and control logics – well-founded, data-based and compatible with regulations.

The methodological foundation of our work is the Behavioral Change Model 2.0 (BCM 2.0): This model developed by FehrAdvice is based on over 40 years of behavioral economics and more than 1,500 scientific studies – under the constant scientific direction of Univ. Prof. Ernst Fehr, one of the most influential and most cited economists worldwide.

BCM 2.0 ensures the **system, measurability and effectiveness** of all change processes – in every practice and for every customer project.

OUR CORE PRACTICES AND TOPICS

1. **Management Strategy**
   - ✓ Development and implementation of leadership, control and decision-making architectures
   - ✓ Strategy Communication & Management Communication
   - ✓ Organizational Development & Change Enablement
   - ✓ Strategy Execution and Transformation
   - ✓ Efficiency and Excellence Programs
2. **Employee Strategy**
   - ✓ Incentive and compensation models
   - ✓ Talent and performance management (incl. development paths)
   - ✓ Employee Experience & Engagement
   - ✓ Organizational Culture and Feedback Systems
3. **Customer Strategy**
   - ✓ Pricing strategies and pricing tactics, value proposition and positioning
   - ✓ Segmentation and targeted customer approach
   - ✓ Customer Journey & Touchpoint Management
   - ✓ Loyalty programs and customer loyalty
   - ✓ Growth and sustainable development of the customer base
   - ✓ Innovation management and testing of new business models
4. **Governance & Compliance**
   - ✓ Governance Architectures and Committee Governance
   - ✓ Regulatory & standardization (incl. adaptation to international standards)
   - ✓ Compliance management and monitoring
   - ✓ Culture of integrity and trust

5. **Digital Transformation & Innovation**
   - ✓ Development of digital decision architectures and platforms
   - ✓ Data-based control, analytics & reporting
   - ✓ Introduction and support of AI & automation
   - ✓ Innovation Architectures & Rapid Prototyping

OUR POSITIONING – WHY FEHRADVICE?

- **100% Behavioral Economics**: Strictly science-based: no opinions, no classic consulting routines – but behavioral logic based on architectural work based on BCM 2.0.
- **Practice-oriented & controllable**: Our goal is not "convincing through volume", but targeted, measurable change in behaviour – through consciously designed decision-making architectures and clear areas of responsibility.
- **Experience in highly regulated sectors**: Whether financial markets, healthcare, sustainability or public administration – we develop compliance and governance architectures that have an impact both internally and externally.
- **Regulatory-compatible**: Methods and tools are compatible with international standards such as FINMA, OECD, NICE, AMNOG, ICER.
- **Long-term impact instead of short-term reaction**: We create sustainable control logics – not crisis management, but reliable systems to promote legitimacy and effectiveness.

In short

, FehrAdvice makes change manageable – evidence-based, practical and future-proof. Not through control illusion, but through better strategic and operational decisions.
This is our contribution to the governance and future viability of our customers.

WHAT IS THE BEHAVIORAL CHANGE MODEL?

The Behavioral Change Model 2.0 (BCM) is a scientifically sound decision architecture developed by FehrAdvice & Partners AG for the targeted and sustainable control of behavior in organizations and complex systems.

The model is based on over 40 years of behavioral economics and the findings from more than 1,500 evidence-based scientific papers that have been systematically incorporated since the founding of FehrAdvice & Partners in 2009.

Under the scientific direction of Univ. Prof. Ernst Fehr – the most influential economist in the German-speaking world and one of the most cited economists in the world – the latest findings in behavioural economics are continuously screened and integrated. The model is thus continuously developed and remains scientifically up-to-date.

THE METHODOLOGICAL FOUNDATION OF ALL FEHRADVICE PRACTICES

BCM 2.0 is the methodological backbone for all consulting fields of FehrAdvice & Partners (management strategy, employee strategy, customer strategy, governance & compliance, digital transformation & innovation).

Typical fields of application (use cases):

- Assessment and prognosis of **behavioural change probabilities**
- Measuring and increasing the **acceptance of new strategies**, **products** or **business models**
- **Design, testing and optimization** of interventions, incentives and incentive systems
- **Optimization of pricing models** and loyalty mechanisms
- Reduction of **rule violations** and increased **compliance**
- Screening and management of **change risks**
- Monitoring and predicting the success of **digitization projects**
- Management of **complementarities in multiple parallel behavioral goals**
- **Impact analyses** of extreme scenarios and identification of critical pathways to **risk mitigation**

BCM 2.0 makes it possible to understand, predict, make measurable – and specifically design – human behavior and complex change processes systematically, connectable and adaptable in all practices.

PRACTICAL APPLICATION AND SPECIAL STRENGTHS

- ✓ **Design of interventions and behavioral change journeys**: Targeted development, control and evaluation of complete behavior change processes – from the first awareness intervention to the sustainable rollout.
- ✓ **Measurability and predictability of complementarities**: identification, measurement and targeted combination of interventions so that their effects reinforce each other.
- ✓ **Identification of invisible risk patterns and behavioral risk assessment**: Early warning system for hidden risks and silent influencing factors in the change process.

- ✓ **Simulation and evaluation of alternative intervention strategies**: Evidence-based simulation of various packages of measures and their interactions – before they are implemented in real life.
- ✓ **Integration of external contextual factors**: Consideration of environment, culture, regulation and informal structures for holistic behavioural control.
- ✓ **Impact analysis of extreme scenarios and identification of critical paths to risk mitigation**: Analysis of worst-case or shock scenarios (e.g. market upheavals, regulatory changes, reputational crises) with targeted determination of critical pathways in order to proactively identify and minimize organizational and behavioral risks.

THE FOUR CENTRAL BEHAVIORAL FUNCTIONS OF BCM 2.0

1. **Awareness function**: Perception is the basis of all actions. Communication and environment design determine what stakeholders see and understand in the first place.
2. **Willingness function**: Perceived controllability creates a willingness to participate. Clearly defined roles and transparent decision-making leeway provide security.
3. **Benefit structure**: Only what is experienced as meaningful and worthwhile creates real incentives for behavior – but also risks if value propositions are not kept.
4. **Behavioral probability**: The interplay of awareness, willingness and benefit structure decides whether new behavior actually arises – or not.

THE CONCRETE ADDED VALUE FOR YOUR ORGANIZATION

- Systematic control and precise design of complete change journeys
- Measurability and predictability of the impact and complementarity of interventions
- Identification of invisible risk patterns and early risk assessment
- Simulation of extreme scenarios and derivation of critical paths for risk minimization
- Measurable progress and higher acceptance
- Sustainable effectiveness in transformation, compliance and innovation

DIGITAL EXPANSION

The BCM 2.0 is compatible with digital tools such as:

- **BEATRIX Suite:** Simulation-based reporting and control tool for willingness and governance.
- **Compliance Decision Chat:** Interactive support for reflection and clarification of everyday situations.

BCM 2.0 makes change in all areas of FehrAdvice plannable, controllable and sustainable – evidence-based, practical and connectable.
